

Academic Learning Compact - Sustainability Studies

The four-year Bachelor of Arts in Sustainability Studies degree requires you to demonstrate understanding of the dynamic relationship between environmental health, economic welfare, and social justice in a changing world. Students investigate the interdependence of these three goals and explore how they best can be pursued over the long term on local, national, and global levels.

Additional information is available from your major's website.

Before Graduating You Must

- Complete a capstone course that has a service learning, internship, or integrated research project component. Students are evaluated both by the course instructor and their direct supervisor.
- Satisfy the Florida statutes for the College-Level Academic Skills Requirement.
- Complete requirements for the baccalaureate degree, as determined by faculty administering the program.

Skills You Will Acquire in the Major (SLOs)

1. Broad knowledge of sustainability scholarship, including natural scientific, social scientific, and humanistic approaches.
2. Knowledge of the relationship of sustainability to Ethics, Culture and Human Behavior, Economics, Law and Policy, Production Systems and the Built Environment, Ecology and Environmental Stewardship.
3. Critical assessment of sustainability principles and practices.
4. Effective written and oral communication of a range of approaches, frameworks, principles, and practices of sustainability.
