2012-2013 Academic Assessment Plan for Ph.D. in Interdisciplinary Ecology

College of Agricultural and Life Sciences

A. Mission

3

The mission of the School of Natural Resources and Environment is to provide interdisciplinary environmental degree programs with university-wide scope that provide future leaders with integrated thinking about natural and social systems and make them ready to overcome barriers to sustainable management of natural resources and the environment with reliable knowledge and good judgment. The Ph.D. degree program challenges students to garner and integrate an understanding of the dynamics and interplay of both natural and human systems in a holistic manner. The School of Natural Resources and Environment supports the missions of the college and university to serve the nation's and state's critical needs by contributing well-qualified and broadly diverse citizenry prepared to lead and participate in the workforce through graduate education and to expand our understanding of the natural world, the intellect and the senses through graduate student research.

SLO Type	Student Learning Outcome	Assessment Method	Degree Delivery
Knowledge	Identify the components, processes, and interactions of the social- ecological system	1) Evaluation of the student's Program of Study by the Supervisory Committee and the School using a faculty- developed rubric; 2) Evaluation during the qualifying examination and dissertation defense by the Supervisory Committee using a faculty-developed rubric.	Campus
Skills	Apply the scientific method to generate new knowledge	1) Evaluation of the student's Program of Study by the Supervisory Committee and the School using a faculty- developed rubric; 2) Evaluation during the qualifying examination and dissertation defense by the Supervisory Committee using a faculty-developed rubric.	Campus
Professional Behavior	Interact with professional peers with honesty, ethical behavior, cultural sensitivity, teamwork, and effective communication	1) Consistent adherence to the University's Honor Code; 2) Faculty evaluation of professional behavior during class activities, seminars, research work, qualifying examination, dissertation defense and participation in professional societies. These behaviors will be evaluated over the duration of the student's degree program by the Supervisory Committee and assessed according to a faculty-developed rubric at the time of the thesis or project defense.	Campus

B. Student Learning Outcomes and Assessment Measures

C. Research

The Ph.D. degree program challenges students to understand both natural and human dynamics in a holistic manner and to foster integration of human activities with natural resources and the environment. The Ph.D. degree program in Interdisciplinary Ecology promotes interdisciplinary thinking in natural resources and the environment by combining (1) coursework in the basic and applied science of ecology, related social sciences, and sustainability with (2) competence in an approved program in a traditional field of study. The former is achieved with a core-course and distribution requirement. The latter is achieved by additional coursework leading to a concentration as approved by the major adviser and supervisory committee. Each student is expected to develop a research proposal that provides not only the rationale for their work, but a detailed description of the methodological and analytical details necessary to carry out the work and analyze the data collected. The dissertation itself is a written culmination of the effort and represents an original scientific contribution that has been successfully defended.

E. Assessment Cycle

Assessment Cycle for: <u>Ph.D. in Interdisciplinary Ecology</u> Analysis and Interpretation: Program Modifications:

<u>College of Agricultural and Life Sciences</u> June 2014 and June 2017 Annually following data compilation/inspection and August 2014 and 2017 following analysis September 2014 and September 2017

Dissemination:

Year	11-12	12-13	13-14	14-15	15-16	16-17
SLOs						
Content Knowledge						
#1	D	D	А	D	D	А
Skills						
#2	D	D	А	D	D	А
Professional Behavior						
#3	D	D	А	D	D	А

D = data compiled; A = compiled data analyzed

F. Measurement Tools

Students pursuing the Ph.D. degree in Interdisciplinary Ecology are, by nature of the program, engaged in a wide variety of learning activities and research endeavors. Thus, there is not a common suite of courses or even a specific area of knowledge that can be used to assess Student Learning Outcomes (SLOs). In the Interdisciplinary Ecology Ph.D. degree program, a graduate student's Supervisory Committee tailors his/her plan of study specifically to the educational needs, research plans and career aspirations of the individual student. It is the responsibility of the major advisor and supervisory committee to regularly evaluate the academic progress of the student and assess the student's performance relative to professional standards, as judged collectively by the supervisory committee.

The achievement of the Interdisciplinary Ecology program requirements as well as outcomes for knowledge, skills and professional behavior for each Ph.D. student are determined by the major advisor and supervisory committee throughout the program of study. Formal assessments of SLOs occur immediately after the qualifying exams and dissertation defense based on a faculty-developed rubric. The same form and scoring system are employed for each student to record and report the professional judgment of the supervisory committee, with respect to each of the aforementioned SLOs.

The Coordinator of Academic Programs collects and collates the SLO assessments from each Ph.D. student and the resultant data are entered into a digital database for subsequent analyses by the Graduate Coordinator and Director of the School of Natural Resources and Environment. To assess academic performance of the Interdisciplinary Ecology Ph.D. program, SLO scores for all students will be subject to regular trend analyses. Results will be summarized and reported to the appropriate academic administrators in accordance with the aforementioned Assessment Cycle.
