Who Applies the Assessment Method?

Response:
Faculty Committee

Individual Student Assessments

Describe the individual student assessments and the assessment method that will be used to measure each SLO. Input N/A if requested changes to do not apply.

Response:
Each student is assigned a final paper in PHC 6313 Environmental Health Concepts in Public Health. In this final paper students are asked to demonstrate how their knowledge of One Health can be used to tackle complex environmental health problems. This final paper gives certificate students an opportunity to apply the knowledge they have acquired from all two of their required certificate courses to a specific complex health problem. A grade of 80% or better on the final paper is needed in order to successfully complete this assignment. ProctorU, an online proctoring, will be used as a platform to verify the identity of the students.

Description and Rationale

Briefly describe the modification(s), including the revised language, and provide the rationale/justification for the revision. Templates are available for the curriculum map, assessment timeline, and assessment cycle on the [Institutional Assessment website](#).

Response:
The Certificate in One Health is a 12-credit hour graduate certificate program that was developed to address the growing need for a One Health approach to health needs globally.

Emerging infectious diseases, food safety, and environmental problems are increasingly recognized as global and regional issues, with potentially serious impacts on human health,

animal health, the environment, and national economies. Often these problems are difficult to control because they require interdisciplinary and international partnerships and there are many barriers to such collaborations. The One Health approach seeks to break down those barriers and to engage diverse professionals in problem solving. The One Health approach has been endorsed by numerous professional organizations and institutions and is considered the best strategy to tackle some of today's most troubling problems.

The primary purpose of the One Health Certificate is to provide One Health training to a broad array of professionals and students who wish to follow such careers.

This Certificate was designed to support individuals, companies, organizations, and governmental agencies in providing One Health training to a future generation of multi-domain thinkers, their employees and international partners. In addition to the knowledge individual students gain, the Certificate will increase the professional capacities of their organizations and often improve their organization's international relationships. The certificate proposes a truly interdisciplinary model to address complex health issues faced by human, animal, and plant populations in a changing environment.
