Course Description Furthers the Athletic Trainers’ therapeutic and functional performance knowledge and advances clinical skills in the design and implementation of exercise and nutrition programs for the prevention, management and enhancement of activity/performance.
Prerequisites ATR7309c Evidence-Based Therapeutic Intervention
Co-requisites n/a
Rationale and Placement in Curriculum Offered after the therapeutic intervention course (as this serves as a more advanced exercise programming course) and before the functional movement assessment course, which uses the functional conditioning knowledge.
Course Objectives 1. Design, implement and modify training programs to meet patient/athlete goals using appropriate exercise physiology, muscle physiology, biomechanics and health/wellness principles.
2. Construct programming at various time intervals related to training (e.g., pre-event, recovery, etc.), which utilizes the principles of energy balance (e.g., nutrition), hydration, macro and micronutrients for the physically active population.
3. Identify proper technique and instruct the athlete/patient regarding appropriate posture, muscle activation and form during performance of functional activities.
4. Execute conditioning sessions or program designs with appropriate safety and regulatory standards.
5. Design and implement training programs using baseline measures, pre-screening tools and scholarly evidence (i.e., normative data).
6. Distinguish challenges to psychosocial well-being of the athlete/patient, including signs of
over-training, body image conditions, steroid or other performance enhancing substance abuse.

7. Use research to determine the efficacy of common ergogenic aids to performance.
