GATOR*ONE*
& Door Reader Updates

Infrastructure Council Meeting, October 2, 2023

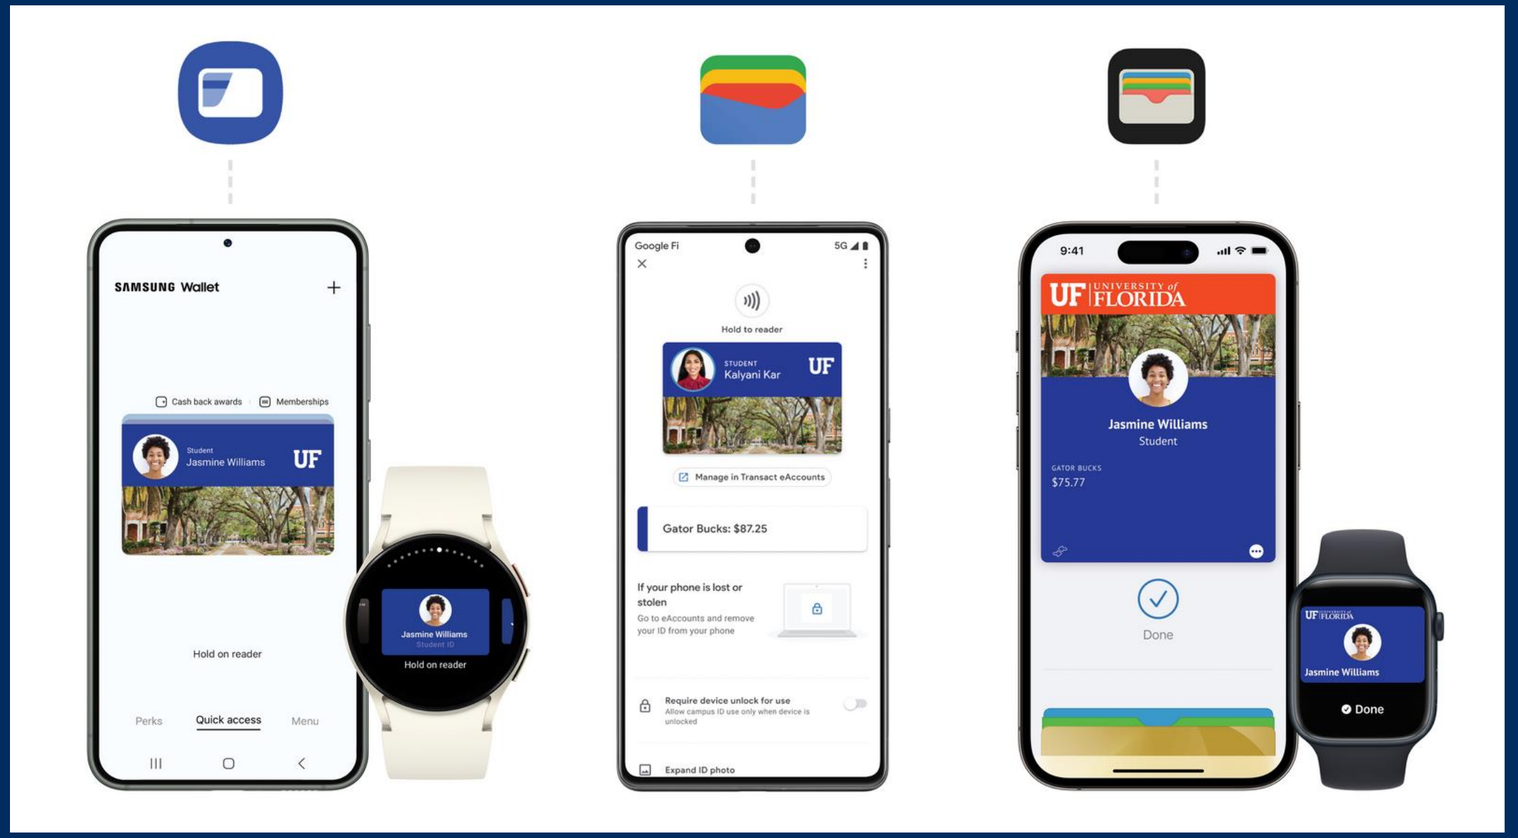
UF | Business Services
UNIVERSITY *of* FLORIDA

The New **GATOR** *ONE* Card - February 2023

Faster, more secure transactions.

- NFC Chip
- Mag Stripe
- Barcode

The New Mobile **GATOR***ONE* - April 2023



- iOS, Android phones/watches
- Apple, Google, Samsung Wallet

UF is the first higher-education institution in the state to adopt mobile technology.

Physical Security Upgrades

UF Implementing 30 Million Dollars Towards Security Upgrades

By AJ Willy

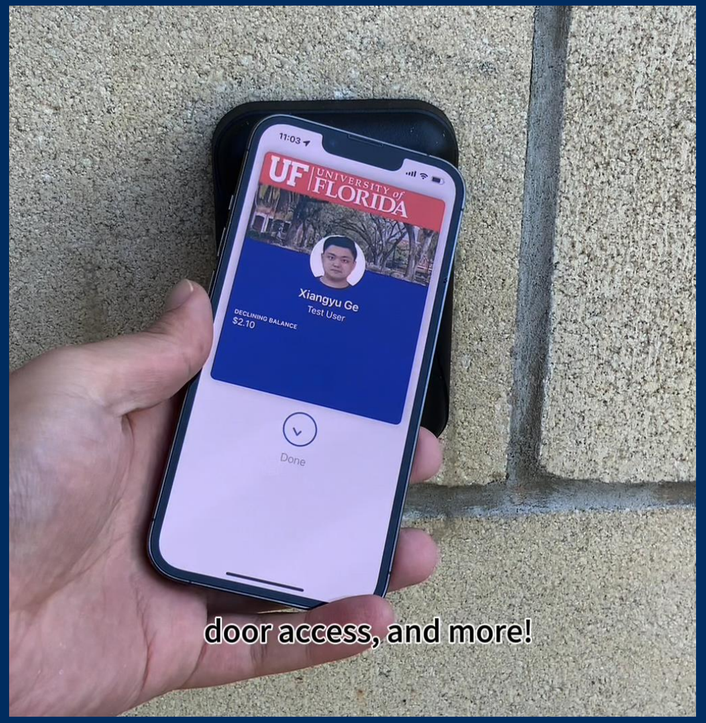
Published: Jul. 24, 2019 at 6:05 PM EDT

As a top 10 public institution, the University of Florida is looking to improve all aspects of the university to rise even higher in the rankings. One of those aspects is the security around campus.

The university will be putting 30 million dollars towards new security cameras, access control, and license plate readers.

Door Reader Upgrades

Once the project is complete, the old **GATOR** 1 cards can no longer be used for door access at UF buildings. All readers will be tap (NFC) only; no mag swipe.



- **UF Buildings - 85% (124/146)**
  UF HSC Buildings - 0/15
- **Shands - no current plans for door reader upgrades**

The Plan for Shands/HSC

Shands

Short-term: Partner with HR/ID badging office

- Issue the same NFC card technology as UF, i.e. the Shands badge design would be printed on a UF card

Long-term: UF/Shands collaborate on strategy to reduce number of IDs/combine access credentials

HSC

- All new UF HSC employees and students receive a physical card, mobile ID, and overlay badge (if required).
- Existing employees/students are eligible for the mobile ID and new card (at no cost).
- Install new door readers at HSC late fall/early spring

Note: Shands employees are not eligible for the mobile ID unless also a UF employee

New Card? Mobile? Or Both?

Overall UF strategy: Mobile-first

But…different strategy for HSC

- Depends on your job needs and physical environment
- A phone/mobile ID may not be the best option for clinical settings or research environments
- The old Gator 1 will continue to work for wearable ID purposes

Other Questions...

1. Will the hospital and related facilities have updated readers?

2. Is this for building-wide access or is there a means to have individual rooms (computer lab, for instance) so that we can eliminate keys for all student researchers and employees?

3. If used for building access, what is the process for gaining access for a particular individual/building? ex. Shands, off-site IFAS, HiPerGator.
